

The International Mathematical Union is a non-governmental and non-profit scientific organization devoted to promoting the development of mathematics across the world. IMU is a member of the International Council for Science – ICSU.

The objectives of the International Mathematical Union are:

- To promote international cooperation in mathematics.
- To decide on the location and assist the organization of the International Congress of Mathematicians that takes place every four years.
- To support other international scientific meetings or conferences.
- To acknowledge outstanding research contributions to mathematics by awarding scientific prizes.
- To encourage and support other international mathematical activities considered likely to contribute to the development of mathematical science in any of its aspects, pure, applied, or educational.

IMU President László Lovász and former Presidents Lennart Carleson, Ludwig Faddeev, and John Ball - Oslo, May 22, 2007

IMU was founded in 1920 and reborn after World War II in 1951. Detailed information about IMU, its history, and its activities can be found at IMU's website www.mathunion.org. A valuable history source is the book by Olli Lehto, *Mathematics Without Borders: A History of the International Mathematical Union*, Springer-Verlag, 1998.

International Congress of Mathematicians – ICM

The first ICM took place in Zurich, Switzerland in 1897. The ICM 2010 in Hyderabad, India is No. 26 in what has become the foremost series of mathematical gatherings worldwide. IMU considers the organization of the ICMs as its most important activity. An ICM should reflect what is going on in mathematics in the world at that time, present the best work of all mathematical subfields and different regions of the world, and thus point to the future of mathematics. The invited speakers at an ICM are carefully selected by an outstanding program committee which is supported by section panels. They are mathematicians of the highest quality who are able to present current research to a broad mathematical audience. The proceedings of all International Congresses have been digitized and they will be made freely available during 2010. The book of Guillermo Curbera, *Mathematicians of the world, unite!*, AK Peters, 2009, provides a lively historical perspective of the ICMs.

IMU Prizes

The scientific prizes awarded by IMU are deemed to be the highest distinctions in the mathematical world. The opening ceremony of an ICM is the appropriate occasion to present these awards: Fields Medals (two to four medals are given since 1936), the Rolf Nevanlinna Prize (since 1986), the Carl Friedrich Gauss Prize (since 2006), and the Chern Medal Award (awarded for the first time in 2010).

The Fields Medal recognizes outstanding mathematical achievement. The Nevanlinna Prize honors distinguished achievements in mathematical aspects of information science.

The Fields Medal, front and back - photographs by Stefan Zachow

The Gauss Prize is awarded for outstanding mathematical contributions that have found significant applications outside of mathematics. The Chern Medal honors an individual whose lifelong achievements in the field of mathematics warrant the highest level of recognition. For the Fields

Medals (often referred to as the Nobel Prize of mathematics) and the Nevanlinna Prize a special age rule applies according to which a candidate's fortieth birthday must not occur before January 1st of the year of the Congress at which these prizes are awarded. For further information, see www.mathunion.org/general/prizes.

IMU also strongly supports the Abel Prize and nominates members of the Prize Committee. It plays a similar role with respect to the Ramanujan Prize for young mathematicians working in developing countries which is funded by the Niels Henrik Abel Memorial Fund and awarded by the International Centre for Theoretical Physics (ICTP) in Trieste.

IMU Membership and General Assembly

The International Mathematical Union has no individual members. Its *Members* are countries. Each Member country is represented through an *Adhering Organization*, which may be its principal academy, a mathematical society, its research council or some other institution or association of institutions, or an appropriate agency of its government. The Member countries adhere to different groups ranging from group I to V. The higher the number of the group, the more votes the country has and the more dues it pays. These dues finance almost all the activities of IMU.

A country starting to develop its mathematical culture and interested in building links to mathematicians all over the world is invited to join IMU as an *Associate Member*. For the purpose of facilitating jointly sponsored activities and jointly pursuing the objectives of the IMU, multinational mathematical societies and professional societies can join IMU as *Affiliate Member*. At present IMU has 68 Members, 4 Associate, and 3 Affiliate Members. Every four years the IMU membership gathers in a *General Assembly* (GA) which consists of delegates appointed by the Adhering Organizations, together with the members of the Executive Committee. All important decisions are made at the GA, including the election of the officers, establishment of commissions, the approval of the budget, and changes of the statutes and by-laws.

Publications

Every two months IMU publishes a short electronic newsletter, IMU-Net, that aims to improve communication between IMU and the worldwide mathematical community by reporting decisions and recommendations of IMU and highlighting issues that are under discussion. In addition, IMU-Net reports on major international mathematical events and developments, and on other topics of general mathematical interest. Everyone can read the newsletters and can subscribe at www.mathunion.org/imu-net. IMU Bulletins are published annually, see www.mathunion.org/publications/bulletins/archive/, with the aim to inform IMU's membership about the Union's current activities. This includes reports about important decisions, budget, and other administrative and organizational issues.

Organization and Executive Committee

The International Mathematical Union is administered by an Executive Committee (EC) which, in accordance with the IMU Statutes and subject to the direction and review of the members, conducts the business of the Union. The EC consists of the *President*, two *Vice-Presidents*, the *Secretary*, six *Members-at-Large*, all elected for a term of four years, and the *Past President*. The EC is responsible for all policy matters and for such tasks as choosing the members of the ICM Program Committee and various prize committees. The EC meets physically for two days once a year and carries out most of its business by e-mail.

IMU Commissions and Committees

Mathematical Education: IMU keeps close contacts to mathematics education through its International Commission on Mathematical Instruction (ICMI). This commission is organized similar to IMU with its own Executive Committee and General Assembly.

Developing Countries: A significant percentage of IMU's budget, including grants received from individuals, mathematical societies, foundations, and funding agencies, is spent on activities for developing countries. Starting from 2011, this will be done through the newly created Commission for Developing Countries (CDC).

History of Mathematics: The International Commission for the History of Mathematics (ICHM) is operated jointly by the IMU and the Division of the History of Science (DHS) of the International Union for the History and Philosophy of Science (IUHPS).

Information and Communication: The Committee on Electronic Information and Communication (CEIC) advises IMU on matters concerning mathematical information, communication, and publishing.

Commission for Developing Countries – CDC

IMU's recently formed Commission for Developing Countries – CDC brings together all of IMU's historical and current initiatives in support of mathematics and mathematicians in the developing world “under one roof”. In particular, it incorporates into its portfolio the work of IMU's **Commission on Development and Exchanges – CDE**. For the last thirty years, the Commission on Development and Exchanges has been receiving applications and awarding grants for:

Research travel by mathematicians based in developing and economically disadvantaged countries.

Mathematics conferences organized in developing and economically disadvantaged countries.

CDE's mission also included supporting research partnerships and in some cases longer-term cooperation with regional centers. Since 1998, CDE has supported a total of 349 applications in the above-mentioned categories. More details are available at www.math.ohio-state.edu/~imu.cdc/cde/.

In addition, in the last 8 years, IMU has gradually increased its attention to the needs of colleagues in the developing world. It established the **Developing Countries Strategy Group – DCSG** to develop new programs and to raise the funds to support them. Besides direct IMU funding, DCSG receives generous continuing support from the Norwegian Niels Henrik Abel Memorial Fund. The work of DCSG also becomes a part of the portfolio of the Commission for Developing Countries. Some DCSG initiatives:

Mathematics in Africa: Challenges and Opportunities

Funded by the John Templeton Foundation, IMU/DCSG has released a report “Mathematics in Africa: Challenges and Opportunities” on the current state of mathematics in Africa and on opportunities for new initiatives to support mathematical development. This report can be downloaded at [www.mathunion.org/fileadmin/IMU/Report/Mathematics in Africa Challenges Opportunities.pdf](http://www.mathunion.org/fileadmin/IMU/Report/Mathematics_in_Africa_Challenges_Opportunities.pdf).

African Mathematics Millennium Science Initiative

AMMSI is a network of mathematics centers in sub-Saharan Africa that organizes conferences and workshops, visiting lectureships and an extensive scholarship program for mathematics graduate students doing PhD work on the African continent. DCSG support has most recently focused on the AMMSI scholarship program, which needs continuing international funding to maintain its vital work of providing the continent with its next generation of mathematical leadership. More details can be found at the AMMSI website www.ammsi.org.

Mentoring African Research in Mathematics

DCSG assisted the London Mathematical Society in founding the Mentoring African Research in Mathematics – MARM program, which supports mathematics and its teaching in the countries of sub-Saharan Africa via a mentoring partnership between mathematicians in the United Kingdom and African colleagues, together with their students. It focuses on cultivating longer-term mentoring relations between individual mathematicians and students. More details are available at the MARM website www.lms.ac.uk/grants/MARM.html.

*Dr. Nakamaye and students of the course *Topology, Real and Functional Analysis* at Obafemi Awolowo University in Ile-Ife, Nigeria, in March, 2009.*

*Dr. Alex Mogilner and students of the course *Applied Mathematics and Modeling* at the National University of Laos in August 2009.*

Volunteer Lecturer Program

The Volunteer Lecturer Program – VLP of IMU/DCSG identifies mathematicians interested in contributing to the formation of young mathematicians in the developing world. The Volunteer Lecturer Program maintains a database of mathematician volunteers willing to offer month-long intensive courses at the advanced undergraduate or graduate level in degree programs at universities in the developing world. IMU also seeks applications from universities and mathematics degree programs in the developing world that are in need of volunteer lecturers, and that can provide the necessary conditions for productive collaboration in the teaching of advanced mathematics. Finally, VLP pays travel and living expenses of the volunteer lecturers.

Details and application instructions are available at www.math.ohio-state.edu/~imu.cdc/vlp/.

Support for the work of ICMI in the developing world

DCSG periodically offers support to the International Commission on Mathematical Instruction for its programs, exhibits and workshops in emerging countries, especially in Asia and Africa. (More details at the ICMI website www.mathunion.org/icmi/).

Financial Support for the International Congress of Mathematicians 2010

Every four years, DCSG also administers the IMU program offering travel support to mathematicians based in developing countries to attend the International Congresses of Mathematicians.

International Commission on Mathematical Instruction – ICMI

ICMI is a forum to promote reflection, collaboration, exchange and dissemination of ideas and information on all aspects of the theory and practice of contemporary mathematical education, from primary to university level. Furthermore ICMI provides a link between educational researchers, curriculum designers, educational policy makers, teachers of mathematics, mathematicians, mathematics educators and others interested in mathematical education around the world. For all information on ICMI see www.mathunion.org/icmi/home.

ICMI initiates appropriate activities, publications and other programmes designed to further the development of a quality mathematical education for all, and to secure public appreciation of mathematics. It is also charged with the conduct of IMU's activities on mathematical or scientific education. In the pursuit of its objectives, ICMI cooperates with various thematic and regional groups outside its own structure. It supports AFRICME (Africa Regional Congress of ICMI on Mathematical Education), CIAEM (Inter-American Conference on Mathematical Education), EARCOME (East Asia Regional Conferences in Mathematics Education), and EMF (Espace Mathématique Francophone). ICMI publishes a bimonthly email newsletter, ICMI News (see website to subscribe).

Amongst other activities, the ICMI Studies are regarded as significant events. New studies are initiated more or less annually: a theme is chosen, and a discussion document generated. There follows a time for contributions, an invitational conference which works towards producing a book on the “state of the art” of mathematics education in that area. See the ICMI website for past and on-going studies.

ICMI and IMU currently collaborate on two projects. The Pipeline Project attempts to gather and analyse data on the “pipeline” of students and graduates in the mathematical sciences on a worldwide basis. The Klein Project, inspired by Felix Klein's book *Elementary Mathematics from an Advanced Standpoint*, aims to produce a book and web-resources to help upper secondary teachers make connections between the mathematics they teach and the contemporary field of mathematics. The main output, a book, will be simultaneously published in several languages. A series of Klein meetings is being held to allow wide contribution to this project.

Historical Note

ICMI was established in 1908 at the International Congress of Mathematicians held in Rome with the initial mandate of analysing the similarities and differences in the secondary school teaching of mathematics among various countries; this comparative study ultimately became a massive six-year project producing 187 volumes, containing 310 reports from eighteen countries. The founding President was the German mathematician Felix Klein (1849–1925), and the first Secretary-General was Henri Fehr from Switzerland, one of the co-founders of *L'Enseignement Mathématique*, a journal which was adopted as the commission's official organ. After interruptions of activity around the two World Wars, ICMI was reconstituted in 1952 and then became an official commission of IMU.

Mathematics education held a place at the International Congresses of Mathematicians in a section initially called “Teaching and History of Mathematics” – it was in this section at the 1900 ICM in Paris that David Hilbert gave his talk “Mathematical problems”. As the history of mathematics later acquired a section of its own, the name changed to “Mathematics Education and Popularization of Mathematics”, reflecting the broader nature of the field.

Over time, as the needs and complexity of mathematics education grew, ICMI developed its own strong community and this community elected directly its Executive Committee for the first time at the ICMI General

Assembly of 2008. The status as a Commission of IMU, however, remains. More basic historical information on ICMI can be found in Olli Lehto’s book mentioned previously. On the occasion of the Symposium held in Rome in March 2008 to celebrate the centennial of ICMI, a website on the history of the Commission was launched:

www.icmihistory.unito.it

ICMI Executive Committee (2010-2012), first meeting, April 2010

International Congress on Mathematical Education – ICME

A major responsibility of ICMI is the quadrennial International Congress on Mathematical Education (ICME). This entails selecting the host country, appointing an International Programme Committee (IPC), and overseeing progress of the congress preparations. The practical and financial organisation of each ICME is the responsibility of a Local Organising Committee.

Launched in 1969 at the initiative of ICMI President Hans Freudenthal (1905–1990), the ICMEs have been held since then in leap years. Successive ICMEs have been held in Lyon, Exeter, Karlsruhe, Berkeley, Adelaide, Budapest, Québec, Sevilla, Tokyo, Copenhagen, and Monterrey. They usually attract 3000-5000 participants, and the programme includes nearly forty Topic Study Groups, thirty Discussion Groups and sixty Regular Lectures, with nine plenary sessions including reports from Survey Teams asked to review particular aspects of mathematics education.

ICME-12 will be held in Seoul, South Korea, in July 8-15, 2012, www.icme12.org. The Chair of the IPC is Sung Je Cho. Bids are currently open for ICME-13 in 2016. Starting with ICME-8, a special ICME Solidarity Fund, built by setting aside some ten percent of the total amount collected through the registration fees, has provided grants in order to support and increase congress participation from less affluent regions of the world.

ICMI Prizes

In 2003 ICMI created two awards in mathematics education research: the Felix Klein Award, for lifelong achievement in mathematics education research, and the Hans Freudenthal Award, for a major programme of research on mathematics education. These awards are announced every two years and formally conferred at the opening ceremonies of ICMEs.

History of Mathematics

To encourage the study of the history of mathematics and to promote a high level of historically and mathematically sophisticated scholarship in this field, IMU and the Division of the History of Science (DHS) of the International Union for the History and Philosophy of Science (IUHPS) jointly operate *The International Commission for the History of Mathematics* (ICHM), see www.unizar.es/ichm.

Information and Communication

The IMU EC established in 1998 the **Committee on Electronic Information and Communication – CEIC** with a very broad mandate to advise IMU on matters concerning mathematical information, communication, and publishing. Among CEIC's major achievements are its reports *Best Practice Recommendations on Information and Communication*, see www.mathunion.org/ceic/Publications/Recommendations/recommendations.pdf, *Some Best Practices for Retrodigitization*, see www.mathunion.org/ceic/Publications/retro_bestpractices.pdf, *Digital Mathematics Library: A Vision for the Future*, see www.mathunion.org/ceic/Publications/dml_vision.pdf.

An outgrowth of the CEIC activities is the report on impact factors and other bibliometrics, *Citation Statistics*, see www.mathunion.org/fileadmin/IMU/Report/CitationStatistics.pdf, released in cooperation with the International Council for Industrial and Applied Mathematics – ICIAM and the Institute of Mathematical Statistics – IMS.
