CWM
Committee
for Women in
Mathematics

CWM is concerned with issues related to women in mathematics worldwide. Its main objectives are:

Visibility

To propose, encourage and facilitate activities to increase the visibility of women in mathematics and their representation in the community at all levels and in all parts of the world.

Networks

To help establish networks of female mathematicians at the continental or regional level, especially in developing or emerging zones. Since 2017, the CWM Annual Calls have invited proposals for funding activities and initiatives that support women in mathematics worldwide, with priority given to projects in developing countries.

Website

To maintain up-to-date content on its website. The CWM proudly collects information about a wide range of activities for women mathematicians taking place around the globe.

In addition to news and resources, the CWM website includes a list of organizations for women in mathematics in 49 countries, providing a means for women to connect with one another and increasing their visibility.

CWM Ambassadors

CWM has ambassadors in over 100 countries. Each of these contacts has the job of disseminating information such as CWM funding calls, and also of keeping CWM informed about activities or initiatives for women in mathematics in their region.

(WM)²

The World Meetings for Women in Mathematics (WM)² are satellite events of the ICM organized by the CWM to encourage and support women in mathematics worldwide.

The first edition took place in Rio de Janeiro in 2018, the second was held primarily online in 2022, and the third is scheduled to take place in Philadelphia in 2026.

Remember Maryam Mirzakhani

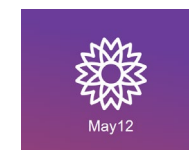

The Remember Maryam Mirzakhani Exhibition consists of 18 original posters. It was first produced by CWM in 2018 for the Maryam Mirzakhani Memorial during the first (WM)². Since then, it has been shown in several places across the globe. Institutions interested in hosting the exhibition can contact CWM to request an agreement.

Gender Equality in Science

The IMU is one of the nine founding members of the Standing Committee for Gender Equality in Science (SCGES), an independent committee established in 2020 as a follow-up to the Gender Gap in Science Project. The book containing the project's final report is available in open-access format through the CWM website and on Zenodo.

May12

May 12 marks the birthday of Maryam Mirzakhani. This date was chosen to celebrate women in mathematics in her memory, with the goal of inspiring women

worldwide, celebrating their achievements in mathematics, and encouraging an open, welcoming, and inclusive working environment for all.
